

Applicable tax rates for wind power generation companies

What is the windfall tax on electricity generators?

The windfall tax on electricity generators announced in the government's Autumn statement is a severe deterrent to new renewable energy projects that are desperately needed, says RenewableUK. Chancellor Jeremy Hunt announced that renewable electricity generators will face a 45% windfall tax from January 2023 until March 2028.

Should wind turbines be taxed?

The clear message with any wind turbine proposal is that it is essential to look at the tax planning and "business bag" (the business with which the turbines may be combined) to plant the turbines into, to protect potential IHT. Consider the practical tax planning:-

What are the tax issues relating to wind farms?

Julie Butler looks at various tax issues concerning wind farms. With the increased number of "wind farms" and the increased income arising from wind turbines the question is being asked what are the Income Tax, Inheritance Tax (IHT) and Capital Gains Tax (CGT) positions relating to the asset and the income?

What is the windfall tax for renewables?

Chancellor Jeremy Hunt announced that renewable electricity generators will face a 45% windfall tax from January 2023 until March 2028. By comparison, the windfall tax for the oil and gas sector will be set at a lower rate of 25% to 35%.

What is the new 45% electricity generator tax?

A new, temporary 45% Electricity Generator Levy will take effect on power generators returns from 1 January 2023. For the purposes of the tax, extraordinary returns will be defined as the aggregate revenue that generators make in a period from in-scope generation at an average output price above $\pounds 75/\text{MWh}$.

Do wind turbines attract capital allowances?

The installation of wind turbines in a business will attract capital allowances including a proportion of the associated professional costs and site preliminaries. The government intends to provide more certainty about the rate of these capital allowances following a recent consultation.

Ramp rate: a measure of how quickly a power station can change its power output and supply to the grid as a portion of the power station's total power generation capacity.
