How do you tighten a solar panel flange?

Tighten end clamps to 15 ft lb (21 Nm) using torque wrench- *use anti-seize lubricant. Align grounding clip beneath adjacent solar panels. You will require a 13mm socket for the flange nut. Tighten mid clamps to 15 ft lb (21Nm) using torque wrench -*use anti-seize lubricant. o fast rack rail extends 2in or less from panel side (Ref. Fig. 12).

How many lugs do I need to install solar panels?

You will require a 13mm socket for the T-Bolt and an 11mm socket for the setscrew. You will require a single lugassembly for each length of continuous rail -*use anti-seize lubricant. Install solar panels square to roof perimeter/rail. Provide 1/4" (6mm) - 3/8" (10mm) gap between vertical rows of panels.

How many rails does a solarmount need?

The 156-inch SolarMount rail (part number 300011) is my best bet. Each row of modules requires two rails (top and bottom). This system, which has two rows of modules, requires four rails. Further, since I will be splicing two 156" rails in order to reach the required 294.6" rail length, I will need a total of eight 156" rails.

What is a solar module clamp?

Module Clamps are Type 304 stainless steel for higher yield strength and durability. Pre-assembled module clamps feature no loose parts and a spacer that keeps free standing clamps in place for a quicker module installation. Patented. Note: Replace xxx with module depth from the Solar Module Specification Sheet.

What materials are used for mounting base brackets?

Mounting base brackets are fabricated from Series 6000 structural marine grade aluminum. 5/16" hardware included. "L" Feet are fabricated from high-strength 3/16" aluminum and include a vertical slot for adjusting to irregular surfaces. 5/16" coated hardware included. "L" Feet are fabricated from high-strength 3/16" aluminum.

Which side of solar panel should be perpendicular to rails?

Longest side of solar panel must be perpendicular to rails. NOTE: For structural reasons, the orientation of the L-Brackets on adjacent rails must either face away from each other or towards each other. NOTE: Max. east to west spacing of L-brackets is 48 inches. Individual rooftop applications may vary.
