How much will sodium ion batteries cost in 2028?

Assuming a similar capex cost to Li-ion-based battery energy storage systems (BESS) at \$300/kWh, sodium-ion batteries' 57% improvement rate will see them increasingly more affordable than Li-ion cells, reaching around \$10/kWh by 2028.

Are sodium ion batteries a viable option?

Scalability: The scalability of sodium-ion battery production promises substantial economies of scale. As production ramps up, the per-unit cost of batteries is expected to decrease, making them an even more attractive option for large-scale energy storage and electric vehicles.

Are solar batteries expensive in Zimbabwe?

It is becoming more common to install solar batteries with solar panels, especially now as many people are taking a step of switching to solar as a source of energy as a result of load shedding in Zimbabwe. Everyone wants to know the price of solar batteries because batteries are the most expensive pieces in a solar system.

Will sodium-ion batteries dominate the future of long-duration energy storage?

With costs fast declining, sodium-ion batteries look set to dominate the future of long-duration energy storage, finds AI-based analysis that predicts technological breakthroughs based on global patent data. Sodium-ion batteries' rapid development could see long-duration energy storage (LDES) enter mainstream use as early as 2027.

How much does a lithium ion battery cost?

For a proper lithium ion battery, you might need to part with over \$1000 USD. However, despite being relatively new and more expensive, lithium-ion batteries have quickly become the favorite solar energy storage option among some homeowners.

Will China lead the way in sodium-ion battery production?

Although the companies are yet to commercialise their technologies, Chinese battery company Great Power last year announced a 50MW/100 megawatt-hour LDES project to power a data centre, demonstrating that sodium-ion batteries are already under consideration for LDES. "China will probably lead the way for sodium-ion battery production," adds Gorski.
