What is solar photovoltaic (PV)?

Solar photovoltaic (PV) is the generation of electricity from the sun's energy, using PV cells. A Solar Cell is a sandwich of two different layers of silicon that have been specially treated so they will let electricity flow through them in a specific way. A Solar Panel is made up of many solar cells.

What is the photovoltaic effect?

This conversion is called the photovoltaic effect. We'll explain the science of silicon solar cells, which comprise most solar panels. A photovoltaic cell is the most critical part of a solar panel that allows it to convert sunlight into electricity. The two main types of solar cells are monocrystalline and polycrystalline.

Can a photovoltaic cell produce enough electricity?

A photovoltaic cell alone cannot produce enough usable electricity for more than a small electronic gadget. Solar cells are wired together and installed on top of a substrate like metal or glass to create solar panels, which are installed in groups to form a solar power system to produce the energy for a home.

Are solar panels a viable option for domestic electricity production?

Solar panels are appearing on more and more rooftops around our suburbs as solar photovoltaics (PV) become an increasingly viable option for domestic electricity production. Photovoltaic solar cells, such as those in these rooftop panels, convert light directly to electricity. Image source: Marufish /Flickr. But how exactly does it work?

What is a photovoltaic cell?

A photovoltaic cell is the most critical part of a solar panel that allows it to convert sunlight into electricity. The two main types of solar cells are monocrystalline and polycrystalline. The "photovoltaic effect" refers to the conversion of solar energy to electrical energy.

Are solar and photovoltaic cells the same?

Solar and photovoltaic cells are the same, and you can use the terms interchangeably in most instances. Both photovoltaic solar cells and solar cells are electronic components that generate electricity when exposed to photons, producing electricity.
