The photovoltaic fixed bracket is an important part of the solar photovoltaic power generation system. It is mainly used to firmly support photovoltaic components (such as solar panels) and ensure that they can face the sun at a fixed angle for a long time, thereby effectively absorbing and Convert solar energy into electrical energy.

It provides optimization scheme of double-sided components. There is no shelter on the back. The double-sided+intelligent tracking mode greatly improves the power generation. It can track the sunlight in real time and search for light intelligently. Comparing with the traditional fixed bracket, the power generation can be increased by 10-15%.
