

China Southern Power Grid failed to bind WeChat

Will China's power grid build a digital power grid?

China Southern Power Grid, one of the country's two major power grids, also plans to further step up digital power grid construction to make sure its percentage of nonfossil energy power generation accounts for 61 percent by 2030.

Who is China Southern Power Grid co?

In accordance with a State Council rule on electric power system reform, China Southern Power Grid Co was officially launched and put into operation on Dec 29, 2002. It is a centrally-administered company, with the State-owned Assets Supervision and Administration Commission of the State Council (SASAC) performing duties as its investor.

What is a southern power grid?

Southern power grids extend approximately 2,000 kilometers from east to west, covering a variety of sources for power generation, including water, coal, nuclear, pumped storage, oil, gas and wind.

Will China continue to invest in grid construction?

State Grid Corp of China, the world's largest electricity company by power generation capacity, vowed to continue investing in grid construction this year with 473 billion yuan (\$73.5 billion) in investment, up 2.71 percent year-on-year.

How will China's new energy policy affect the power generation mix?

“Ways will be found to cut thermal coal plants' contribution to the power generation mix by reducing some of the output and decommissioning some plants ahead of their economic life's end. This also means that capital spending by State Grid Corp of China may substantially rise so as to meet the higher rate of clean energy sources.”
