

Contracted land to install photovoltaic panels

Can landowners install permanent structures on the land before a solar project?

Generally, before the solar project is installed, we ask that landowners do not install permanent structures on the land, but any farming activities can continue as before. During construction of the solar project, farming or any other use of the land will have to stop.

Can solar farms be built on flat land?

As with most wind power projects, developers only place solar farms on land that meets certain conditions. The land should be sturdy for solar projects and not fall foul to sinking from soft soil. But it's also essential to consider the landscape for a site, as solar projects are particularly reliant on flat land without steep slopes.

Do you need planning permission for a solar farm?

Ground mounted systems measuring over 9m sq. (approximately 4-5 solar panels) require planning permission and as solar farms are typically built on rural land, they are subject to rigorous planning procedures before you can start harnessing solar power.

Can a person own a solar PV installation?

While an individual can own the solar PV panels installed at their property, there are instances where the owner of an installation may be different from the owner of the property or site at which the installation is located.

How does a solar project affect landowners?

Once the solar project is operational, there is generally no impact on the daily activities of the landowners, aside for the occasional maintenance visit. More and more often, we see that dual use of the land is being considered, also known as agrivoltaics, so that the land can be farmed and generate electricity from the sun in the same space.

How much land does a solar farm need?

Generally, a solar farm requires around 25 acres of land for every 5 megawatts of installation capacity. Not all of this land will be usable for a project. So, developers tend to seek around 200 acres for a commercial-scale project to be on the safe side. A minimum of 10 acres is considered the industry standard for smaller projects (around 1MW).

Ground mounted systems measuring over 9m sq. (approximately 4-5 solar panels) require planning permission and as solar farms are typically built on rural land, they are subject to ...

NABCEP offers board certifications for many professions within the solar industry, including PV design, solar heating installation, PV installation, and more. Other Resources Diversity Best Practices Guide for the Solar
