

Disassembly and assembly of Fengjun 7 generator

What is a generator manual for?

This manual provides installation, operation and maintenance instructions for your generator. It is mandatory to apply all the recommendations in this manual to achieve the high reliability and performance level of your generator. All work done on the generator has to be performed by a qualified specialist.

How do you align a generator Shim?

Raising the rear, exciter end of the generator as necessary, place two 0.010-inch (0.254 mm) shims in the vertical (6 o'clock and 12 o'clock) positions between the generator adapter and the engine flywheel housing. This will give a good starting point for alignment. Remove the vertical shims at this time.

What should you not do when assembling a generator?

Caution: Ensure the generator field wires are flat in the wire slot so they don't tear during assembly. Do not pull on the edges of the heat sinks or on the exciter armature windings. Caution: Do not pound on the rectifier or armature windings.

How do you remove a bearing housing from a generator?

On the opposite-drive-end side, lift the top part of the bearing housing until it can be moved in an axial line over the bearing liner without touching it, and then move it out. On the DE side lift the housing out and over the top of the generator.

How to lubricate a wind turbine generator bearing?

To lubricate the bearings (DE &NDE) of a wind turbine generator, refer to your 'specific installation and maintenance manual' for more information. Do not lubricate the bearings while the machine is not rotating, whether using a centralized lubrication system or a manual pump.

What should I do if my generator fails?

Report any damage to the transportation company and Kato Engineering. If the generator is received during cold weather, reduce condensation on cold surfaces and failure due to wet windings by allowing the generator to reach room temperature before removing the protective packing. Unpack the generator carefully to avoid scratching painted surfaces.

The generator set must be installed, operated and safety precautions must be followed in accordance with the maintenance and user manual. The generator set will serve safely only in this way. Safe operation responsibility of the generator set is belongs to the people who install, use and maintain the generator set.

If the machined surface of the diesel generator set is rusted due to oil or paint peeling off, it should be derusted in time and painted with anti-rust paint. 2. Precautions for disassembly and assembly. The disassembly and assembly method of the diesel generator set is roughly the same as that of the asynchronous motor.

Disassembly and assembly of Fengjun 7 generator

The following points should be paid attention to when assembling the fuel injector of 300 kW diesel generator set: 1. During the assembly, parts must be kept clean. In particular, the sealing parts of the fuel injector couple and the end face of the fuel injector body of the 300kW diesel generator set.

III. Assembly. The assembly of the turbocharger is usually carried out in the reverse order of disassembly, but the following points should be noted: 1. The compressor impeller, turbine and other parts should meet the original balance requirements, and the assembly position is not allowed to be exchanged.
