Why should you choose GE wind turbine repair?

As a leading wind turbine repair company, GE combines technical expertise and rigor to keep your turbines online by servicing and repairing major systems within the turbine to avoid potential downtime and underperformance. This is all backed by data-driven insights, which enable us to drive down your O&M costs through intelligent monitoring.

What are the key features of GE's wind turbine upgrades & parts repairs?

Key features of our wind turbine upgrades and parts repairs: Availability of parts is critical to keep your wind farms running smoothly. GE's Wind Parts Center of Excellence provides a full range of offerings to support your preferred level of service.

How do you maintain a wind turbine?

Ensuring the structural integrity of wind turbine components is essential for safe and reliable operation. Structural maintenance tasks may involve: Ultrasonic testing or thermographic inspections to detect hidden defects. Monitoring of tower vibrations and resonance frequencies to identify potential issues.

What is effective wind turbine maintenance?

Effective wind turbine maintenance involves a combination of preventive, predictive, and corrective measures, tailored to the specific needs of each wind turbine. Gaining a thorough understanding of wind turbine components is crucial for carrying out these tasks effectively.

What should be included in a wind turbine maintenance checklist?

Below is a breakdown of the essential maintenance tasks to include in a wind turbine maintenance checklist: Routine visual inspections of the key components of wind turbines such as blades, towers, and nacelles are crucial for identifying signs of wear and damage. Inspections may include:

How can GE reduce turbine downtime?

Repairs will last longer and prevent future catastrophic failures. GE can reduce turbine downtime due to blade failure with our access to the largest network of new and refurbished blades. GE methodology and tooling technology enable reduced crane requirements and higher wind speed limits.
