We show that the generator maintains sustained performances in a wide range of ion concentrations over 10 orders of magnitude. Moreover, the flexible generator exhibits excellent mechanical stability, and can be scaled-up, as evidenced by the output of ~101.07 V by the integration of 100 power generators (seawater, 21 °C, 55% RH).

The lack of desirable diffusion barrier layers currently prohibits the long-term stable service of bismuth telluride thermoelectric devices in low-grade waste heat recovery. Here we propose a new design principle of barrier layers beyond the thermal expansion matching criterion. A titanium barrier layer with loose structure is optimized, in which the low Young's ...

Despite the significant progress, the output performance of droplet-based electricity generator (DEG) is still constrained by the long precharging time and low surface charge density. 40 First, a DEG generates electricity from the surface charge, which can be generated from the continuous liquid-solid contact electrification during droplet impinging. 31 ...

Pigs in art history, between prejudices and symbolism . In most cultures, and especially in Western countries, pigs are considered dirty, lazy, and uncouth animals, and when they were celebrated in art and literature, it was mainly because of their meat or their look, which has always aroused hilarity and humor.

The three-dimensional diagram of the dynamic semiconductor-water-semiconductor structure generator is shown in Figure 1(a), in which the water droplet is located between a N-type silicon and a P-type silicon. Two polyvinyl chloride (PVC) layers with a thickness of 1 mm separate two semiconductors, which forms a small channel for water droplet.

The swirl cooling system consisted of a swirl generator with two tangential jet nozzles and a swirl tube. Three typical blockage cases with the obstacle at the throats of the jet nozzles, on the si...

Water evaporation is a ubiquitous natural process exploiting thermal energy from ambient environment. Hydrovoltaic technologies emerged in recent years offer one prospective route to generate electricity from water evaporation, which has long been overlooked. Herein, we developed a hybrid hydrovoltaic generator driven by natural water evaporation, integrating an ...
