Flat roof PV systems are generally installed in the form of concrete columns and PV brackets. The investment cost is not high and the economy is better. On a horizontal roof, we can determine the angle of the PV panels by adjusting the brackets so that the PV system receives the most light radiation to obtain the maximum power generation. The biggest benefit of installing PV power ...

The solar PV panels also form part of the roof covering, directly replacing roof tile sections, giving the extra benefit of time saving on installing the roof tiles. Comprehensive installer training is also available, giving contractors the skills and knowledge they need to carry out installations quickly and to a high standard.

However, considering that only about 85% of a solar panel's energy capacity is fulfilled, you'd need five 160W panels to meet this 608kWh energy requirement, which would set you back around £1,120. This means it would take 26 months of using your motorhome to break even on your flexible solar panel purchase.
