How do I install solar panels?

The first step in the solar panel installation guide is to install the mounts that will support the solar panels. These come in three primary types: pole, roof-ground, and flush mounts. Depending on the chosen mount, you can place solar panels on an RV, a rooftop, or even as a standalone device.

How to choose a solar roof?

Solar rooftop panels are installed using solar mounts. Identifying the area for solar panel installation helps determine how many solar mounts you need. Also, while identifying the total rooftop area, you can specify the extent of shade-free area. Ascertain the endurance capacity of the roof, as the solar panels are bound to weigh heavy on it.

How to install solar panels on a roof?

Take into account the roof orientation of the panels and ensure that the mounting framework is slightly tilted, usually between 18 and 36 degrees. Some companies use solar trackers to improve the efficiency of energy conversion. Following the mounting setup, the solar panels are securely attached to the mounting structure.

What is a roof-mounted solar panel installation?

Roof-mount solar panel installations are less intrusive and invasive, and there is no need for extensive pre- and post-installation work or construction. Roof-mounted solar panels add aesthetic appeal and blend seamlessly with roofs, making them ideal for residential rooftop surfaces.

How long does it take to install solar panels on a roof?

Installing ground-mounted solar systems requires special permits and allowances based on location, and the process can take from a few days to several months. Solar panels on roofs have ensured affordability and accessibility in solar energy usage. However, it is necessary to be aware of the precautions before installing. Here are a few:

This is because a solar panel system usually weighs about 20kg per square metre, which the great majority of roofs can hold. However, flat roofs may not always be strong enough for solar panels. Drilling into a flat roof can cause leaks, so an installer will usually ballast the panels instead - but these will add around 80kg per panel.
