What are the options available on substation design of solar plants?

Let us see the Options Available / New Ideas on Substation Design of Solar Plants : MODEL -II ( SCHEME WITH TWO POWER X'Mer ( 1 Active + 1 Spare of 20 / 25 MVA FOR 20MW SOLAR PV PLANT ) In the Above Model Scheme, there are Two No's of Same Rating Power Transformer in the System. The Plant Overall Capacity is 20MW.

How to connect a solar PV plant to a substation?

To connect a solar PV plant to distribution or transmission networks (46 - 550 kV), it is necessary to step up the voltage level from medium to high voltage. The purpose of a substation is to convert low voltages to high voltages, or vice versa, using power transformers.

What is a PV substation?

The substation is used to connect the PV plant to high-voltage distribution or transmission grids. The voltage level of the PV plant will be stepped up to a high voltage level to facilitate the transport of the electric current. The preferred high voltage level of distribution and transmission networks will depend on the country of the project.

Can pvdesign design a solar substation?

As solar projects get larger, it's common for utility companies to outsource the design of the substation. For this reason, pvDesign has launched a new feature to generate the basic engineering of some of the most common substations: line to transformer substation, single busbar substations and double busbar substations.

What is a fixed adjustable photovoltaic support structure?

In order to respond to the national goal of "carbon neutralization" and make more rational and effective use of photovoltaic resources, combined with the actual photovoltaic substation project, a fixed adjustable photovoltaic support structure design is designed.

Why do utility companies outsource solar substation design?

The power transmission and distribution industry has witnessed significant upsurge due to its growing life expectancy and the rising demand for effective, safe, reliable and stable transmission and distribution networks. As solar projects get larger, it's common for utility companies to outsource the design of the substation.

The tracking photovoltaic support system consisted of 10 pillars (including 1 drive pillar), one axis bar, 11 shaft rods, 52 photovoltaic panels, 54 photovoltaic support purlins, driving devices and 9 sliding bearings, and also includes the connection between the frame and its axis bar. Total length was 60.49 m, as shown in Fig. 8.

German independent power producer (IPP) SUNfarming has partnered with energy services firm SPIE to design and install the substation for a 753MWp agrivoltaics (agriPV) park in Germany.

The placement of the photovoltaic generation system (PVGS) and operation of the on-load tap changer (OLTC) should have great impacts on the system loss and voltage quality, which are the main concerns of the distribution operator. Considering these multiple evaluation indices and other constraints, this paper proposed a substation-based optimal ...
