What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

What are the advantages and disadvantages of solar PV power generation?

There are advantages and disadvantages to solar PV power generation. PV systems are most commonly in the grid-connected configuration because it is easier to design and typically less expensive compared to off-grid PV systems, which rely on batteries.

How does a solar PV system work?

Solar PV panels - convert sunlight into electricity. Inverter - this might be fitted in the loft and converts the electricity from the panels into the form of electricity which is used in the home. Generation meter - records the amount of electricity generated by the solar PV system.

What happens if I consume more electricity than my solar PV system produces?

If you consume more electricity than the solar PV system is producing, you will purchase the additional electricity from your electricity supplier. Solar PV systems cannot store the electricity they produce unless you also have a battery fitted to your home (which most don't).

Are solar panels a sustainable source of electricity?

Solar panels, with their efficiency rates typically ranging from 15% to 22%, play an essential role in converting sunlight into usable electricity. The silicon cells within the panels absorb sunlight and transform it into electrical energy, making it a sustainable and renewable source of power.

Should you use a solar system with a generator backup?

With a PV system in place, you become the master of your own energy destiny. For those seeking additional energy security and resilience, combining solar panels with battery storage or generator backup can be a game-changer. These options ensure that you have a backup power supply during periods of low sunlight or grid outages.
