

Is the Black Network WeChat reliable

Does WeChat have a privacy and security ecosystem?

Privacy in the WeChat Ecosystem This report is part one of a two-part series on a privacy and security analysis of the WeChat ecosystem. We've created an FAQ to accompany this report. This work performs the first analysis of WeChat's tracking ecosystem.

Is WeChat safe?

Despite WeChat's global popularity, the platform has come under repeated scrutiny for security and privacy issues. The platform lacks end-to-end encryption of chat messages, giving Tencent visibility into all messages sent over the platform.

Does WeChat protect your privacy?

Yes, WeChat has a huge billion+ user base. Yes, it's very popular and feature rich. But none of that outweighs WeChat's bad track record on privacy and security. The bottom line: we feel the only way to protect your privacy when using WeChat, is to never use WeChat. *Privacy is absolutely not included. How creepy do you think this is?

Does WeChat have a network encryption protocol?

Despite the universality and importance of WeChat, there has been little study of the proprietary network encryption protocol, MMTLS, used by the WeChat application. This knowledge gap serves as a barrier for researchers in that it hampers additional security and privacy study of such a critical application.

Why is WeChat so popular?

WeChat is a hugely popular social media and messaging app owned by Chinese tech giant Tencent. And when we say popular, we mean it's one of the most downloaded apps in the world, with over a billion active users. It's also one of the least private messaging apps we've come across.

Is WeChat more private than signal?

The fewer data elements that are listed, the more private is the messaging app. Also, note the different language between the two: Signal doesn't link contacts to an identity. WeChat links all sorts of things. Although Chinese citizens have no choice on whether or not to use WeChat, the rest of us can do a few things to be more private.
