Over Easy Solar has developed a lightweight design for vertical bifacial systems for flat roofs employing small modules with the height of one cell. To model the expected output of these type of systems can, however, be challenging, as it is uncertain if conventional models will give accurate results for vertical bifacial PV.

Solar PV system design. When designing a solar PV system, there are a number of important factors to consider: Orientation - the direction the system will face (e.g. south, east/west). For existing buildings with sloping roofs, this is clearly fixed and will influence the viability of installing solar (north-facing is not worthwhile in the UK).

The complete guide to designing PV systems on flat roofs. In this article, we will explore all the basic information needed to successfully design and install a PV system on a flat roof. From the choice of materials to the ...
