In some coastal areas, because of the frequent hurricanes, the strength requirements for photovoltaic brackets are very strict, which requires PV bracket manufacturers to be able to design a sufficiently strong solar bracket system. However, the increase in strength is always accompanied by an increase in cost.

The material's corrosion resistance extends the life of the bracket and improves the overall durability of the solar panel system. Additionally, zinc-aluminum-magnesium alloys are highly resistant to sea salt and other environmental pollutants, making them ideal for installing solar panels in coastal areas.
