Do energy storage systems cover green energy plateaus?

Energy storage systems must develop to cover green energy plateaus. We need additional capacity to store the energy generated from wind and solar power for periods when there is less wind and sun. Batteries are at the core of the recent growth in energy storage and battery prices are dropping considerably.

Is battery energy storage a new phenomenon?

Against the backdrop of swift and significant cost reductions, the use of battery energy storage in power systems is increasing. Not that energy storage is a new phenomenon: pumped hydro-storage has seen widespread deployment for decades. There is, however, no doubt we are entering a new phase full of potential and opportunities.
