

New Energy Storage Promotional Poster

What is the Energy Storage Summit?

Our Summit aims to highlight the fundamental role that energy storage will play in this journey, and will strive to recognise, explore and analyse key challenges that may present themselves on the trajectory ahead. One scenario estimates Europe will reach 29.6 GWh of installed capacity by the end of 2024, marking a 72% increase YoY.

Do energy storage systems cover green energy plateaus?

Energy storage systems must develop to cover green energy plateaus. We need additional capacity to store the energy generated from wind and solar power for periods when there is less wind and sun. Batteries are at the core of the recent growth in energy storage and battery prices are dropping considerably.

Why should you attend the Energy Storage Summit?

Over the past ten years, the Summit has gained recognition as the biggest, busiest, most informative, and best networking event in the European energy storage sector, where deals are made on site; generating efficient business for everyone who attends. workshops, an after-party, private networking dinners and much more!

Why is energy storage so important?

There is a growing need to increase the capacity for storing the energy generated from the burgeoning wind and solar industries for periods when there is less wind and sun. This is driving unprecedented growth in the energy storage sector and many countries have ambitions to participate in the global storage supply chains.

Are batteries the future of energy storage?

Batteries are at the core of the recent growth in energy storage and battery prices are dropping considerably. Lithium-ion batteries dominate the market, but other technologies are emerging, including sodium-ion, flow batteries, liquid CO₂ storage, a combination of lithium-ion and clean hydrogen, and gravity and thermal storage.

What is advanced compressed air energy storage (a-CAES)?

The company's patented Advanced Compressed Air Energy Storage (A-CAES) technology functions as an underground 'battery', utilizing mature supply chains and leveraging air, water, rock, and gravity to store and release energy.

In 2021 the share of global electricity produced by intermittent renewable energy sources was estimated at 26%. The International Energy Agency and World Energy Council say a storage capacity in excess of 250 GW will be needed by 2030. The race is on to find alternatives; and progress is being made on refining new technologies.
