Also, dirt build-up could block sufficient light from reaching the cells, resulting in reduced power output. Therefore, if you want maximum productivity from your solar panels" system, seal between your panels. There"s no shortcut.

Bypass Diode in a solar panel is used to protect partially shaded photovoltaic cells array inside solar panel from the normally operated photovoltaic string in the peak sunshine in the same PV panel. In multi panel PV strings, the faulty panel or string has been bypassed by the diode which provide alternative path to the flowing current from solar panels to the load.
