3. The roll forming craft is made by the special Germany cold roll forming program COPRA; the craft is also made the FEA analysis and check. The structure of the rollers is combined, so the line speed difference and resisting force of roll forming is small. The sheet is easy to feed. All these assure the accuracy and stable of the roll forming.

The roof type photovoltaic bracket is usually divided into two kinds of flat roof bracket and inclined roof bracket. Suspended photovoltaic bracket: usually installed at the bottom of buildings or other structures, using steel ropes to hang solar panels, the tilt angle or direction of the photovoltaic bracket can be adjusted as needed.

increase the power generation of solar modules.

A PV mounting bracket roll forming machine is a type of machine used to create metal brackets used to mount solar panels. These machines are capable of creating brackets of various sizes and shapes, depending on the specifications required. In most cases, the machine will use a series of dies to create the desired shape, before cutting the bracket to size.

It can also be used for kinds of shelves, ceiling frames, drywall partition, steel structure building, and so on. The series of Hangzhou Roll Forming Technology's solar PV support forming machines can produce double-in-roll c-shaped steel photovoltaic brackets with consistently high quality at a stable speed.
