

Outsourcing Electronics Factory

When did electronics manufacturing outsource?

In electronics manufacturing the surge to outsource dates back to the 1990s, when large numbers of OEMs critically reassessed their manufacturing strategies to take advantage of new outsourcing opportunities that promised to improve their overall performance and reduce asset and operational costs.

Should you outsource electronics manufacturing?

That may or may not be on the manufacture of your own products. Electronics manufacturing is a complex process and any decision to transfer this practice to an external supplier must be taken with great care. While the benefits of outsourcing for Original Equipment Manufacturers (OEMs) are well documented, there are, of course, risks and concerns.

Why do OEMs outsource their electronics manufacturing?

There are many reasons why an OEM might choose to outsource its electronics manufacturing. And the decision can impact the business in a variety of ways, from the people and premises, through to the relationships the OEM holds with their existing customers and suppliers. Why Outsource?

What is outsource manufacturing?

Outsource manufacturing is a practice where a company delegates its manufacturing tasks to an external entity. This external partner, often a specialized manufacturer, takes responsibility for producing parts or entire products on behalf of the brand.

Should you outsource your manufacturing?

Outsourcing your manufacturing can deliver significant financial and operational benefits across your business. However, there are also risks and challenges associated with it. Outsourcing is a strategic decision with long-term implications. As an OEM the focus of your attention and resources should be where they can make the biggest impact.

What are the different types of manufacturing outsourcing options?

Here's an overview of the most common types of manufacturing outsourcing options. Contract manufacturing involves partnering with an external manufacturer to produce parts or entire products. This option is ideal for companies looking to leverage the expertise and resources of specialized manufacturers.
