Off-Grid Solar Inverters. Off-grid solar power systems use solar batteries to store electricity to solve the problem of intermittency. Because off-grid systems operate independently of the utility grid, electricity must be stored for use at night or at other times when your household consumes more power than your solar panels produce.

Micro inverters improve on string inverters in many ways, because rather than linking all solar panels in a system together (meaning if ever there is an issue with a single panel, all of the energy output is affected) micro inverters are attached to individual panels and invert the energy they create at source, before sending it to your house's switch board or solar battery ...
