

In some coastal areas, because of the frequent hurricanes, the strength requirements for photovoltaic brackets are very strict, which requires PV bracket manufacturers to be able to design a sufficiently strong solar bracket system. However, the increase in strength is always accompanied by an increase in cost.

An effective method is proposed in this paper for calculating the transient magnetic field and induced voltage in the photovoltaic bracket system under lightning stroke.

According to the welding equipment for assembling the photovoltaic bracket, which is obtained through the design, the hoop flange and the first metal plate are limited through the arc-shaped...
