What is a solar Photovoltaic Certification Exam?

The document is a practice exam for solar photovoltaic certification that contains 70 multiple choice questions testing knowledge of PV system components, electrical calculations, safety procedures, and best practices.

Why are photovoltaic systems important?

Photovoltaic (PV) systems are important for a number of reasons. They are a clean and renewable source of energy that does not produce greenhouse gases or other pollutants. They are also relatively efficient, meaning that they can generate a lot of electricity from a small amount of sunlight.

What is a solar photovoltaic system?

Solar photovoltaic (PV) systems use solar panels to directly convert sunlight into electricity. These panels contain photovoltaic cells that absorb sunlight and release electrons, generating an electrical current. The electricity produced can be used to power homes, businesses, and even entire communities.

What is the primary force on a PV system?

Wind load is the primary force on a PV system, but context-dependent. Main tax incentive for PV systems in the US. Used for intermodule connections and home runs in PV circuits. Calculated by multiplying $I_{sc} \times 1.56$ and rounding up. Differs from regular noon and varies with location. PV systems can export extra power to the grid for credit.

Are photovoltaics a good option for health facilities?

Photovoltaics produce no pollutants, require no fuel, and need little maintenance. When economically viable, they are a good option for any health facility energy system. PV systems are of special importance to remote facilities that do not have access to grid power.

Should racking be grounded on a PV system?

Racking and frames should be grounded on every PV system. Convert high voltage low current to low voltage high current. Higher elevation tends to produce more current. Coating metal, not part of solar cell production. Selling products at a loss to gain market share. Load used when excess electricity is generated. Listing for racking in PV systems.
