Types of Inverters. There are several types of inverters that might be installed as part of a solar system. In a large-scale utility plant or mid-scale community solar project, every solar panel might be attached to a single central inverter. String inverters connect a set of panels--a string--to one inverter. That inverter converts the power produced by the entire string to AC.

The control of grid-connected inverters has attracted tremendous attention from researchers in recent times. The challenges in the grid connection of inverters are greater as there are so many control requirements to be met. The different types of control techniques used in a grid-connected inverter are discussed in detail in this chapter.
