These drawings serve as the foundational blueprint for the entire solar installation process, providing structural and electrical engineers with essential guidance to ensure successful project execution.

Why do solar companies need as-built drawings?

By proactively addressing safety considerations through as-built drawings, solar companies can safeguard both personnel and assets. In conclusion, as-built drawings serve as indispensable assets in the realm of solar structural engineering, underpinning the success and sustainability of solar installations.

How much space does a photovoltaic system need?

Photovoltaic modules installed on the ground or on a flat surface occupy an area of approximately 20 m<sup>2</sup>/kWp, avoiding shading between the rows of modules. The design of a photovoltaic system, from the public operator's network to the photovoltaic modules, requires careful planning and compliance with local regulations.

Suppose, in our case the load is 3000 Wh/per day. To know the needed total W Peak of a solar panel capacity, we use PFG factor i.e. Total W Peak of PV panel capacity = 3000 / 3.2 (PFG) = 931 W Peak. Now, the required number of PV panels are = 931 / 160W = 5.8. This way, we need 6 numbers of solar panels each

rated for 160W.
