Section 2: The Photovoltaic PV System Design Process Solar Panel Placement. Effective PV system design involves strategic solar panel placement. Aim for maximum sun exposure all year round, considering the seasonal changes in the sun's trajectory. Commonly, this means south-facing panels in the northern hemisphere. System Sizing

The controller, or solar charge controller, regulates the voltage and current coming from the solar panels going to the battery. If your solar panels will be off-grid, or each panel puts out about two watts or less for each 50-battery amp-hours, then you don't need a controller. Here again, your system might not need a PV combiner box.
