Single Line Diagrams or Schematic Diagrams on OpenSolar take information from the design of your project. You will need a design with relevant components and stringing to generate the fully populated template. Once you complete your design, make sure you save the project. After saving your project you can click on "SLD" from the header:

The schematic diagram typically starts with the solar panels, which are the main source of the system's power. The panels convert sunlight into electricity through the use of photovoltaic cells. The diagram shows how the panels are connected in series or parallel to form an array, allowing for maximum energy production. Next, the diagram ...
