What is a roof-mounted photovoltaic panel system?

Rooftop-mounted photovoltaic panel systems shall be designed to structurally support the system and withstand applicable gravity loads in accordance with Chapter 3. The roof upon which these systems are installed shall be designed and constructed to support the loads imposed by such systems in accordance with Chapter 8.

How do I design a photovoltaic and solar hot water system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future photovoltaic and solar hot water system components. Space requirements and layout for photovoltaic and solar water heating system components should be taken into account early in the design process.

below that of basic snow depth on a flat roof. The designer should confirm this with the solar panel supplier. Higher profile stand mounted PV arrays can have a greater impact on roof snow loads and wind loads and should be individually investigated. As well, solar panel installations on sloped roofs can act to trap snow that
