During this initial consultation, the solar company will: - Assess your energy needs : By reviewing your electricity bills and understanding your consumption patterns, the installer can recommend the right size and capacity of the solar system.

How to install solar panels?

The installation site is prepared by removing any obstacles and ensuring that the roof or ground is clear of debris. If necessary, the roof or ground may also be reinforced to ensure it can support the weight of the solar panels. To install solar panels, several steps must be carried out correctly to ensure a safe and efficient installation.

How do I design a solar PV system?

When designing a solar PV system, there are a number of important factors to consider: Orientation - the direction the system will face (e.g. south, east/west). For existing buildings with sloping roofs, this is clearly fixed and will influence the viability of installing solar (north-facing is not worthwhile in the UK).

Can a solar panel be installed on a south-facing roof?

A solar panel will be most effective if you have a south-facing roof. This will ensure maximum sunlight reaches the panel. You will also have to make sure that your roof can support a panel, and that it has a large enough area for panel installation. Do I need planning permission for solar panels?

What is the post-installation process for solar power systems?

The post-installation process for solar power systems is essential to ensure that the system continues to operate efficiently and effectively. By carrying out these steps, homeowners and businesses can ensure that their solar power system is operating at peak performance and generating the maximum amount of electricity possible.
