

Why should a roof maintenance provider meet with a PV O&M team?

Failure to provide maintenance of a roof system may result in roof-system failure, thereby necessitating PV system removal for roof repair/replacement, which is bad for the prospects of the PV system. By meeting, the roof maintenance provider can share particular areas of concern with the PV O&M team and vice versa.

What guidance is there on the performance of PV systems?

The Good Practice Guide provides some guidance on the performance of PV systems in Section 4 of the updated PV Installers Guide. The PV Specialist should model the system using one of the software simulation programmes available, which have a 'library' of modules and inverters and can select the sunlight conditions most representative of the site.

Can a PV system be installed on a roof?

PV systems can be installed on many different types of roofs. However, installation of a PV system can increase a roof's potential for leaks and damage due to increased rooftop foot traffic and additional attachments to and through the roof membrane.

How do I manage a fleet of PV systems?

Operating and maintaining a fleet of PV systems requires active resource management and data acquisition and analysis by the asset and operation manager(s). Outsource the service to a specialized third-party O&M provider.

What is a reasonable expectation of PV system O&M costs?

Members of the working group have discussed these results and are currently recommending 0.5% for large systems and 1% of system initial cost per year for small systems as a reasonable expectation of PV system O&M costs. These heuristics inform an expectation of PV system O&M costs.

What are the maintenance activities for a PV system?

Maintenance activities are the core element of maintenance services for a PV system. Regular panel cleaning and maintenance should include: Visual inspection of panels and their condition. Reporting damaged or broken panels and any other issues. The physical cleaning of the panels themselves. Products with module-level power elec

Drainage, equipment access, roof maintenance and safety should be considered, in addition to PV layout and positioning to maximize solar output. The Port of Los Angeles has a 50-acre bifacial solar array on an industrial facility that collects reflected light from the surface of the roof in addition to direct sunlight, gathering 45 percent more power than traditional designs.

MAINTENANCE GUIDELINES

- Remove debris such as nails, bottles, cans, balls, boards and bricks.
- Leaves, paper, dirt etc., which may collect at roof drains, gutters and gullies, should be cleared and removed from the roof.
- Cut back tree limbs which overhang the roof to give a metre clearance outside the roof edge.
