

Power plant air curtain door cannot be lifted

Can air curtain units reduce energy losses from an air conditioned entrance?

If conditions are not extreme, an air curtain unit with a non-heated air stream (Ambient Air Curtain units) can also be effective in reducing energy losses from an air conditioned entrance by disrupting the natural convective heat transfer at the doorway.

Can an air curtain be used as a space heater?

The air curtain should not be seen as a space heater for warming up internal areas, especially if it is electrically heated. Heat output is first and foremost to allow the unit to operate as an air curtain. This guide provides just the basic information on Air Curtains and should not be used as a comprehensive design document.

What is an air curtain unit?

In its simplest form, an air curtain unit is a device that provides a continuous broad stream of air circulated across a doorway serving a conditioned space. Air curtain units are normally mounted horizontally over the door. They can also be mounted vertically at the side of the door or under the floor directed upwards.

How do air curtains work?

In its simplest form, an air curtain is a continuous broad stream of air circulated across a doorway serving a conditioned space. Air curtains are normally mounted horizontally over the door. They can also be mounted vertically at the side of the door or under the floor directed upwards. HOW DO AIR CURTAINS WORK ? (1)

Are air curtains necessary for winter operation?

(1) For winter operation air curtains disrupt the natural convection (buoyant flow) effect of warm air spilling out of the top of an open doorway and being replaced by cold air coming in at the bottom.

What should I do after cleaning the air curtain?

Once the air curtain has been cleaned check all electrical connections within the unit ensuring terminals are tight and that crimped connections have not become loose. Refit the grille core in the recessed grille. Reconnect the electrical supply and fully function test the air-curtain to ensure correct operation (See Commissioning).
