Savings per year = Annual energy savings from the PV system (USD) / Initial cost = Total upfront cost of the PV system (USD) If your PV system saves \$800 per year and cost \$12,000 to install: $ROI = (800 / 12000) * 100 = 6.67\%$ 10. Angle of Incidence Calculation. The angle of incidence affects the amount of solar energy received by the PV panel.

When there is more PV power than is required to run loads, the excess PV energy is stored in the battery. That stored energy is then used to power the loads at times when there is a shortage of PV power. The percentage of battery capacity used for self-consumption is configurable. When utility grid failures are extremely rare, it could be set ...
