Despite a limited number of known incidents with domestic battery energy storage systems (BESSs) in the public domain, questions have been raised regarding their safety due to the large energy content within these systems.

What are the international standards for battery energy storage systems?

According to Appendix 1, there are international standards for domestic battery energy storage systems (BESSs). When a standard exists as a British standard (BS) based on a European (EN or HD) standard, the BS version is referenced. The standards are divided into the following categories: Safety standards for electrical installations.

What is the scope of energy storage system standards?

The scope of energy storage system standards includes both industrial large-scale systems and domestic battery energy storage systems (BESSs). Appendix 1 includes a summary of applicable international standards for domestic battery energy storage systems (BESSs).

Do energy storage systems need a CSR?

Until existing model codes and standards are updated or new ones developed and then adopted, one seeking to deploy energy storage technologies or needing to verify an installation's safety may be challenged in applying current CSRs to an energy storage system (ESS).

What are the requirements for energy storage systems?

The requirements for energy storage systems, as stated in article 706, apply to all permanently installed systems operating at over 50 V AC or 60 V DC. These systems may be stand-alone or interactive with other electric power production sources. Currently, these are the conditions outlined in the article.
