Where does solar PV development occur in the world?

Rapid solar PV development has occurred in other areas since 2013, particularly in China. In 2017, China became the largest solar PV market, outperforming Europe, with approximately 1/3 of the world's installed capacity. The world's cumulative installed solar PV power capacity passed 1046 GW in 2022 (IRENA, 2023). Table 3.

How has solar PV technology changed in 2022?

It is seen that the global weighted-average LCOE of solar PV technology reduced by about 89 % from 0.445 USD/kWh in 2010 to 0.049 USD/kWh in 2022. It is noticeable that the LCOE of PV technology has dropped into the range of fossil fuel electricity costs since 2014.

How much will solar PV cost in 2022?

The results from IRENA's REmap analysis also indicate that the global weighted-average total installed cost of solar PV projects would reduce from 876 USD/kWh in 2022 to an average within 340-834 USD/kWh by 2030 and 165-481 USD/kWh by 2050. Fig. 3.

Will RWE increase its solar capacity by 2030?

Internationally, RWE plans to increase its installed solar capacity from 3.9GW to 16GW by 2030. RWE has granted construction contracts to two UK-based firms, Ethical Power and Equans UK & Ireland.

What is the global weighted-average LCOE for solar PV projects?

Fig. 5 shows the variation of the global weighted-average LCOE for solar PV projects since 2010. It is seen that the global weighted-average LCOE of solar PV technology reduced by about 89 % from 0.445 USD/kWh in 2010 to 0.049 USD/kWh in 2022.

How many GW will solar power be installed in 2050?

In comparison to the PV installations in 2018 (481 GW), the world's PV installed capacity is projected to increase almost six times by 2030 (to 2841 GW) and almost 18 times by 2050 (to 8519 GW, of which the distributed scale (rooftop) would account for 40% while the remaining 60% would be utility scale).
