How to connect solar water heater & solar flat plate collector?

The solar water heater and solar flat plate collector panel/s or manifold for the solar vacuum tubes must be connected by using 22mm copper piping, 22mm female Conex fittings and/or 22mm copper elbows and tee-pieces and thermal pipe lagging. Page 10 THEMOSYPHON SPLIT SYSTEM METHOD-DIRECT & INDIRECT SYSTEMS WITH SOLAR FLAT PLATE COLLECTOR PANEL/S 1.

How do you connect two solar flat plate collector panels?

Place the second solar flat plate collector panel on the second roof mounting bracket and slide the two solar flat plate collector panels towards each other, until the two copper tube spigots can be connected. Tighten the compression nuts of the connector fittings taking care not to twist the copper tubes of the solar flat plate collector panels.

What roof pitch should a solar flat plate collector be installed on?

The solar flat plate collector panels or solar vacuum tubes should be installed on a roof pitch greater than 8° and less than 30°. Where the roof pitch is greater than 30°, the installation will require additional support to prevent it from moving downwards when installing and after installing.

How to install a solar water heater?

Install the pitch roof support with solar water heater cradle available from Kwikot at the marked position. Place the solar water heater into the cradle. 5. Important Installation Information In an Indirect system installation, the solar water heater must be fitted with an Expansion Relief Valve 100kPa on the left top side of the front end dome.

How to choose a roof frame for a solar installation?

For a flat roof, a flat roof frame is available from Kwikot. Careful inspection must be carried out to ensure that the roof can support the weight of the entire solar installation once it is filled with water. 2. Determining the roof mounting location - Close Coupled and Split Systems

How to mount solar modules on a roof?

Mounting diagram There are various possibilities for the arrangement of the mounting system and the modules on the roof. The most common option is to horizontally assemble type TF50+ carrier rails and arrange solar modules vertically. For this reason, any further mounting procedures describe such an arrangement.

bracket. Note: The solar pump station MUST only be installed vertically, as shown in Figure 1-1. 5. Separate the wall bracket from the back section of the housing. Drill the wall with an 8mm drill and securely fix the wall bracket to the wall using the fixings supplied. 6. Fit the back section of the insulated housing onto the wall bracket,
