Solar Panel Edge Seal: Liquid Applied vs. Tape. Uncover the advantages of pumpable solar edge tape (PSET) over traditional tape application methods for sealing solar panels.

A solar heat tape is capable of generating temperatures in the range of 500-1000°F. As in the case of a conventional heat tape, a solar-powered one also consumes around 9W of electricity for every linear foot of surface to be heated. The advantage of using solar heat tape is that this doesn't get added to your energy bills.
