How does solar power work?

Solar power converts energy from the Sun into electrical energy. One way to do this is with photovoltaic materials. These can be used to create an electric current when they're exposed to light. This is called the photovoltaic effect. Photovoltaic cells or solar cells can do this.

Can a solar cell make electricity?

The steam can be used to make electricity in a power plant. Solar cells use the Sun's light rather than its heat. When the Sun shines on a solar cell, the cell turns the light energy into electricity. A single solar cell makes only a little electricity. However, groups of solar cells can provide electricity for whole buildings.

When was solar energy invented?

In 1954 PV technology was born when Daryl Chapin, Calvin Fuller and Gerald Pearson developed the silicon PV cell at Bell Labs in 1954 - the first solar cell capable of absorbing and converting enough of the sun's energy into power to run everyday electrical equipment. Today satellites, spacecraft orbiting Earth, are powered by solar energy.
