Yes, solar panels do work on cloudy days -- but not as effectively as they would on a sunny day. Expect them to produce 10-25% of their normal power output, depending on how thick the cloud cover is.

How Do Solar Panels Work in the Winter? Knowing how solar panels work can help you understand how they can still generate electricity in the winter. Solar panels rely on daylight or atmospheric light and not heat from the sun to generate energy. The panels consist of photovoltaic (PV) cells that capture and convert light into electrical energy.

Solar panels work on cloudy days and can generate free energy all year, great news for the UK. Get free quotes from local solar installers ? 0330 808 1045. ... Any excess energy is sent to the National Grid and you miss out on, but a solar battery gives you more power over how you use the energy being generated by the panels.

In the UK, we achieved our highest ever solar power generation at 10.971GW on 20 April 2023 - enough to power over 4000 households in Great Britain for an entire year. 2 and 3 . Do solar panels stop working if the weather gets too hot?

So, the reality is probably more that solar panels work on cloudy days, but not to their peak potential.
