

Solar powered mosquito repellent

What is a solar Mosquito Killer Lamp?

The solar mosquito killer lamp utilizes a high frequency UV light which is proven to be the most effective, to lure flying insects during the day or night to from a practical, efficient, hygienic and automatic electronic insect extermination system.

What is solar scare mosquito?

In order to prevent epidemics, Pranav Agarwal has developed the Solar Scare Mosquito -- a solar-powered repellent device that allows the insects to lay their larvae at dusk and dawn, then produces intermittent ripples during the day to prevent the offspring from breathing at the surface of standing water.

How do solar pest repellents work?

Most solar repellents can detect movement, which then triggers a loud noise, vibrations, or flashing lights to ward off invaders. What distinguishes these devices from other pest repellent devices is the solar panel that helps to power each unit.

Are solar pest repellents safe?

If you've worked hard to maintain a lush landscape or vibrant edible garden, the last thing you want is for burrowing animals to dig up the earth or munch on your produce. Solar pest repellents are safe, easy to install, inexpensive, and have low power requirements thanks to their sun-harnessing design.

How to keep solar fountain water clean and free of mosquitoes?

How to keep your solar fountain water clean and free of mosquitoes. Algae grows where there's lots of sun or nutrients in water. Place the fountain in shade, or use plants to shade the water. Plant roots will also use up nutrients. I will write more about water and aquatic plants in another post to give you all the details and variations!

Do solar pest repellents need batteries?

Charging: You'll likely need batteries to power your solar pest repellents, but as long as there's sunny weather, you shouldn't need to change them very often. Certain units can also be charged via USB, which is helpful when the weather is cloudy and rainy for days on end.
