The impact of direction on solar panel output. Your solar panel system's direction is one of the biggest factors in determining its output. This chart below uses an average of 26 arrays in Yorkshire that all have peak power ratings of 4kWp, and confirms that south-facing is the best direction.

The solar panel size included in a gate opener kit will depend on its weight rating. A 10W solar gate opener may support a 300 lb. gate. Another GTO might be compatible with an 800 lb. gate and come with a bigger solar panel. If the gate opener supports solar power, the kit will include the solar panels required.

A 10-watt solar panel with a mounting bracket can be bought for \$173.12, while a 20-watt solar panel with a mounting bracket can be bought for \$100.74. The product does not include a 12V battery or an AC transformer, but the remote control system between the solar panels and batteries will charge the batteries continuously with solar power.

Under typical UK conditions, 1m<sup>2</sup> of PV panel will produce around 100kWh electricity per year, so it would take around 2.5 years to "pay back" the energy cost of the panel. PV panels have an expected life of least 25 to 30 years, so even under UK conditions a PV panel will generate many times more energy than was needed to manufacture it.
