

State Grid Microfilm Answers

What is the difference between microfilm and microfiche?

Microfilm is a roll film, and microfiche is a sheet film: either may contain negative or positive images, but negatives are more common. A microcard, like any photo print, is a photosensitive paper card, while a microprint is simply ink printed on a card. An aperture card is a microfilm image or cell mounted in a punch card.

What are the different types of microfilm rolls?

Microfilm rolls come in two standard sizes: 16mm and 35mm. The images in these rolls can be master copies, duplicates, positives, or negatives. Proper storage of microfilms is a necessity to protect the collection. If the cellulose nitrate-based film is not stored properly, it will become flammable and pyrophoric.

What is a microfilm reel?

Microfilm is a roll or spool of film with sequential frames of images. These film reels look similar to rolls of movie films. Microfilm rolls come in two standard sizes: 16mm and 35mm. The images in these rolls can be master copies, duplicates, positives, or negatives. Proper storage of microfilms is a necessity to protect the collection.

Is polyester based microfilm a low preservation risk?

Polyester-based microfilm is a low preservation risk. The paper card on which the microfilm is mounted will deteriorate differently depending on the type of paper used. Common Size(s) 7 3/8 " ; 3 " ; card containing one frame of a 35mm microfilm or several frames of a 16mm film.

Background

What is vesicular microfilm?

Courtesy of the University of Mary Washington, Simpson Library. i Synonyms Kalvar; Thermal microfilm Description Vesicular microfilming is a duplication process intended for use as service copies. It contains a diazonium salt coating that is sandwiched between two polyester layers.

Which microfilm is best for storage?

Silver-gelatin black-and-white on polyester is the only microfilm recommended for preservation, since it boasts a 500+ year life expectancy under proper storage conditions (as outlined by ANSI standards). Microfilm Storage Particulate air pollutants are the source of scratches and abrasions.

1. Load the selected microfilm.
2. Turn on microfilm machine.
3. Select the PowerScan program on the desktop.
4. Use the Motorized film control to move microfilm forward or reverse.
5. Drag the green corners to resize the capture window on where you want to scan.
6. Adjust the zoom, brightness, tilt, and contrast of the article, if needed.
