

Use universal angle steel to make storage cabinets

What gauge steel should a kitchen cabinet be?

For home use, 22, 20, or 18 gauge steel provides good durability at a reasonable cost for cabinet sides, doors, and shelves up to 30 inches wide. Use 16 gauge for wider spans or heavy duty storage. The frame should be made with thicker 14 to 18 gauge metal.

How do you build a metal cabinet?

Follow these steps to build a quality metal cabinet: Cut metal stud framing to size according to your plan using an electric saw or hacksaw. Wear eye and hand protection. Connect the studs together into a rectangle with self-tapping metal screws. If needed, weld angle brackets onto the frame to increase strength. Paint the frame if desired.

How do you build a storage cabinet?

Begin by measuring the space where you intend to place your storage cabinet. Note the dimensions as these measurements will guide the cuts for both the base and the box of your cabinet. Using two-by-fours, construct the base of your cabinet. Place a piece of plywood on top of the assembled base.

What are the different types of metal cabinets?

Metal cabinets can be made from various metals including steel, aluminum, and stainless steel. Steel is the most common choice for its strength, durability, and cost. Galvanized steel resists corrosion if exposure to moisture is a concern. Sheet metal is available in standard sizes at home improvement and metal supply stores.

How do I add shelves to a kitchen cabinet?

To add shelves to a kitchen cabinet, make shelves with the same dimensions as the base but using 1x2's instead of 2x2's for the sides. The 1x2 in the front should form a lip to prevent items from sliding off easily. Measure the height needed for the bottom shelf and mark it for reference.

What materials are used to make kitchen cabinets?

This will serve as your guide during construction. Metal cabinets can be made from various metals including steel, aluminum, and stainless steel. Steel is the most common choice for its strength, durability, and cost. Galvanized steel resists corrosion if exposure to moisture is a concern.
