Are lead-acid batteries good for energy storage?

On the other hand, The Energy Storage Association says lead-acid batteries can endure 5000 cycles to 70% depth-of-discharge, which provides about 15 years life when used intensively. The ESA says lead-acid batteries are a good choice for a battery energy storage system because they're a cheaper battery option and are recyclable.

Which battery energy storage system uses sodium sulfur vs flow batteries?

The analysis has shown that the largest battery energy storage systems use sodium-sulfur batteries, whereas the flow batteries and especially the vanadium redox flow batteries are used for smaller battery energy storage systems.
