

Can particle swarm optimization optimize microgrid load scheduling model based on EV?

Therefore, this paper proposes an improved multi-objective particle swarm optimization algorithm to optimize the micro grid load scheduling model based on EV. Microgrid is an autonomous system that can realize self-protection, management and control.

Is micro-grid a useful supplement of power grid?

At present, micro-grid has become a useful supplement of power grid with its flexible power supply and diversified power generation methods. The model includes operation cost, pollutant treatment cost and load variance.

What is a microgrid system?

Microgrid is an autonomous system that can realize self-protection, management and control. It is an effective way to realize active distribution network, which is the transition from traditional power grid to smart grid.

When the microgrid is working on island and grid-connected modes, overcurrent protections in power lines must be adjusted to different distributed generator circuit paths and feeder fuses in the microgrid. This study presents an adaptive overcurrent protection that integrates technical and economic advantages of fuses and relays in a microgrid ...

2.1. Uncertainty. Uncertainty plays a vital role in the optimization-based study of microgrids. It negatively affects the modelling of optimization formulation in several ways due to inherent uncertainties in the realm of electric power, i.e., uncertainties associated with the power consumption, market price, renewable energy generation, status of on-line fossil fuel ...

The U.S. Department of Energy defines a microgrid as a group of interconnected loads and distributed energy resources within clearly defined electrical boundaries that acts as a single controllable entity with respect to the grid. 1 Microgrids can work in conjunction with more traditional large-scale power grids, known as macrogrids, which are anchored by major power ...

A characterization method is proposed to improve the measurement accuracy in visible waveband and shows the proposed method can effectively minimize the FPN and PRNU. Microgrid polarimeters have large advantages over conventional polarimeters because of the snapshot nature and because they have no moving parts.
